

## BANCTEC'S INTELLISCAN—BETTER, FASTER, MORE VALUE

**DALLAS – APRIL 9, 2010** – BancTec Inc., a global provider of advanced, high-volume, document and payment processing solutions and services, is delivering more value, for less money, with updates to its IntelliScan line of high-volume production scanners and its [IntelliScan® USC](#) scanner control software.

Already recognized for its robust, enterprise-class capabilities, the IntelliScan suite of solutions now provides even better performance, with updates that focus on speed, user control and image quality. At the same time, BancTec has lowered the price of its scanner for mid-volume and distributed environments, now called the [IntelliScan® SDS+](#). As a result, customers can process documents more efficiently, and at lower total cost per image scanned. Specific updates to the IntelliScan SDS+ include:

- **Increased speed.** The IntelliScan SDS+ received a 28 percent increase in speed, from 200 to 255 pages per minute.
- **Uncompressed image capability.** The IntelliScan SDS+ is now the fastest known commercial scanner at producing uncompressed, 24-bit color images at 300 DPI. As a result, in situations where it is required, customers will be able to generate maximum quality, “lossless” color scans in less time.
- **New recognition capabilities.** The IntelliScan SDS+ can now handle a wider variety of forms, increasing the number of processes for which it is a suitable alternative.

IntelliScan USC, BancTec's fully integrated capture and transport control application, has also been updated. Specifically, the application possesses enhanced image quality analysis capabilities, as well as stronger real-time forms processing and document recognition. Whether used along with BancTec's IntelliScan hardware, or with other third party scanners, these changes improve the solution's functionality and broaden the number of areas in which it can be deployed. In addition, USC now provides support for most major languages worldwide.

Enhancements have also made the [IntelliScan® XDS](#)—BancTec's enterprise-class, multi-application, high-speed scanner—an even better value as well. First, BancTec's patented TurboTime™ feature has received a boost in speed. Previously rated at 375 pages per minute (ppm) at 200 dpi image capture and 240 pages

at 300 dpi, the scanner can now process documents at a rate of 400 ppm at 200 dpi or 270 ppm at 300 dpi. Therefore, large scanning tasks can be completed up to 12.5% faster. Furthermore, TurboTime now ships with an initial capacity to process 1,000,000 pages at higher speeds. Additional capacity may be added at any time. As a result, customers can react quickly to changing volumes without overbuying processing capacity that is otherwise unneeded.

###

### ABOUT BANCTEC

BancTec helps clients around the world simplify the process of managing their information. Founded in 1972, the company provides a wide range of solutions for automating complex, high-volume and data-intensive business processes for clients in the financial services, healthcare, manufacturing, government, services and utilities industries. BancTec's offerings include business solutions, business process outsourcing, and infrastructure services. With headquarters in Dallas, BancTec serves clients in 50 countries. For more information on how BancTec can help you optimize information management, visit [www.banctec.com](http://www.banctec.com) or call 1-800-BANCTEC.
